

CAMBODIA

Did you know
Cambodians built
Angkor Wat in
the 12th century
via canals?

Almost 900 years ago, Cambodians' innovativeness moved gargantuan bricks from quarries 100 km away via a network of hundreds of canals. The world's largest religious structure, Angkor Wat, was built in the short span of a few decades, using around 10 million sandstone bricks, many weighing up to 1,500kg.

Cambodians' problem-solving skills and the ability to think-on-one's-feet are weaved into our team's DNA.

Since 2016, we have been integral to Cambodia's strive towards the garment import industry's Top 10. We achieved this by leveraging on strong connections with top international brands, close linkages to neighboring countries' logistic hubs, and intimately knowing our country's interwoven transportation grid.

Assistance is never far away. Let our team of local logistics experts serve you with creative and compelling solutions as we help you move your shipment effectively by sea, land, and air.
