

Reduce your ocean freight CO₂ emissions with ocean biofuel

How can you benefit from using biofuel?

- Reduce your ocean freight CO₂ emission by up to 100%
- It counts as real CO₂ reductions which enables you to meet your climate targets
- The solutions is audited by an independent, certified third party to verify the process and to ensure no doublecounting of reductions

>> FACTS ON BIOFUEL FOR OCEAN FREIGHT

- Contrary to CO₂ compensation or offsetting, biofuel counts as an actual reduction of your CO₂ emissions
- Works with existing ocean fuel supply infrastructure as a drop-in blend fuel
- Made from sustainably sourced waste and residue materials
- Available globally no matter where your transportation needs are

TAKE CLIMATE ACTION
NOW
IN A SIMPLE WAY

Measure and scope

We calculate your ocean freight emissions and you decide how much you want to reduce

Fuel switch

The biofuel will be fueled into ships that would normally run on fossil fuel (mass balance principle)

Certification

We issue a certificate on the purchased CO₂ reductions verified by independent auditors
